

Accomplished this week

1. Order Page

95%

- Redesigned each tab based on the new comments
- Tables now look simple on the eyes and not congested
- Added detail screen where order detail and where orders are paid and status are changed. Also we can see, search and paging on all products ordered
- Remove the payment status and orderStatus to be in detail screen
- Funtionalites like changing orders to In-Tranist or Delivered or ReadyForShipment statuses integrated.

2. Inventory Trans-ction Page

99%

- Functionality like updating a certain transaction works flawlessly :)
- Duplicate page limit removed
- Adjusted some naming to afford more space and used icons instead

3. Functionality on the Front Page

95%

- Search inputs toggle button and page limits now redesigned to afford space.
- Category now synced with backend also since we have lots of them a infinite scroll vertically added.
- We have a cart quantity counter added in a attractive manner on each product item
- Now we have now a persistent cart where all the cart will persist till the user orders them or log-outs or discards them.
- Hence all cart items are handle on the client-side only
- Added a dynamic quantity where previously the quantity used to disappear whenever the page was reloaded.
- Added more description to the list-view in the front page and modified the look a bit

4. Ccheckout Page

90%

- Integrated the quantity input with the persistent cart
- Changed some looks on the order and checkout using the comments received.
- Taxing now takes 15% of the total, service charge removed

5. Account(Profile) Page

90%

- Changed the looks based on the comments forwarded

Planned Activity for NEXT week

1. Finish Checkout Page(Printable Invoice)
2. Finish Order page where there is a single bug
3. Code clean up
4. Finish the remaining bits

Issues

1. Waiting accessible image location
2. Waiting for old password in the api
