

## **Accomplished this week**

### **1. Checkout Page**

**95%**

- Added a confirmation pop-up for the users before they order items.
- Added a friendly page users get reply after ordering, they also get information of what they ordered, when and where the order arrives also their order number also is displayed in good manner.
- Added the date converter to display dates in good manner fetched from the back-end, also to send in manner where the back-end accepts it.

### **2. Order Page**

**70%**

- Managed to design each type of order tab
- Managed to sync each tabs with their own API's.
- Added more functionalities like changing payment status and order status of a single order.

### **3. Inventory Transaction Page**

**95%**

- Functionalities like searching inventory transactions completed
- Added additional functionality where the users can filter inventory transaction using there generic names

### **4. eRxEthiopia Mobile v1.2 fix**

**100%**

- fixed an issue that was persistent on one screen only, turns out it was in the backend mobile API. So I updated the API accordingly and we have no null values appearing.

### **5. Account(Profile) Page**

**100%**

- User can now see their own info plus there company detail also.
- Users can now change there password, passwords validation and other necessary requirement also added.
- Users can now changed their profile photo or their company log or photo useful in easily distinguishing companies in list and tables.

### **6. Menu Items Clear**

**90%**

- Unused menus and items now removes from the templates
- Analytical dashboard added

### **7. Pagination**

**100%**

- The total number of pages that are left in the paging now is dynamic according to the per page amount the user inputs. This applied to all where there is a table or list.

## **Planned Activity for NEXT week**

1. Finish payment and status changed for all order types
2. Design and implement the detail screen for one order
3. Finish new adjustment in to make cart in cookies
4. Complete incoming comments

## **Issues**

1. Waiting for API completion on getting inventory-transaction by ID
2. Waiting adjustment in "order/filter" API.
3. Description and other details of a product to be added to DB wating.
